SUBJECT INDEX

to Volume 138, December 1994

Adaptation, control of, G protein β subunits, yeast mating pheromone, 1081
Adenylate cyclase, activation by G protein α subunit, glucose repression of *fbp1* transcription, *Saccharomyces pombe*, 39
Alcohol dehydrogenase
  effect of an intronic polymorphism, *Drosophila melanogaster*, 379
  locus in *Arabidopsis thaliana*, haplotypic divergence coupled with lack of diversity, 811
Allele
  deleterious, substitution processes, molecular evolution, 943
  detection of selective sweeps, naturally occurring *Escherichia coli*, 993
  dnaE911 DNA polymerase antimutator allele, spontaneous mutation, *Escherichia coli*, 263
  molecular evolution of *Mtn* gene, *melanogaster* species group, *Drosophila ananassae*, 135
  segmentation gene *hunchback*, differential regulation of target genes by alleles, *Drosophila*, 125
  sex-determining gene *her-1*, conditional promoter mutations, 317
  somatic inactivation and reactivation of *Ac*, changes in cytosine methylation, transposase expression, 213
  targeted transposition of *vestigial* locus, *Drosophila melanogaster*, 1127
  trajectories, preservation of, alternative fitness sets, 1323
  two-locus two-allele model, epistasis, evolution of reproductive isolation by peak shifts, 533
  white locus insertion, *Lighten up* gene, *Drosophila melanogaster*, 153
Allosuppressor, *SAL6* in yeast, 597
Amino acid, transport mutants resistant to α-difluoromethylornithine, polyamine-dependent processes, *Neurospora crassa*, 649
Antennapedia complex, discovery and genetic definition, 549
Antibodies, evolution of somatic selection, 975
Arabidopsis thaliana, 499, 811, 1239
Arrays, tandem, possible loss of length conservation and reciprocity, recombination or conversion, 511
Ascosporogenesis, directed replacement of *mt A* by *mta a-1*, mating type switch, *Neurospora crassa*, 75
Auxin, disruption of early step, *axr2–1*, *Arabidopsis thaliana*, 1239

Bacteriophage T4
  genome, integration of plasmids, 973
  rates of spontaneous mutation, host fidelity determinants, 553
  replicative DNA helicase, DNA recombination, 247
Beetle, autosomal polygenic variation, expression of Haldane's rule, 791
Bithorax complex, enhancer traps, marking of parasegmental domains, *Drosophila*, 387
Brassica oleracea, 499

Caenorhabditis elegans, 83, 303, 317, 675, 689, 1105
Calcium-binding protein, cellular morphogenesis and mutations in *calphotin*, *Drosophila*, 413
Calmodulin, single yeast gene, structure-based systemic isolation, conditional-lethal mutations, 1041
Cell cycle
  G_1 checkpoint control, exposure to DNA damaging agents, yeast, 271
  three independent forms of regulation in yeast, *HO/CLN1/CLN2* genes, 1015
Chemosensory processes, multiple defects, *daf-11* and *daf-21* mutants, *Caenorhabditis elegans*, 303
Chiton, black, complete DNA sequence, mitochondrial domain, 423
Chromatids, recombination or conversion in tandem arrays, possible loss, length conservation and reciprocity, 511
Chromatin, *RGR1* and *SIN4*, RME1-dependent repression, yeast, 577
Chromosome
  comparative mapping, islands of conserved organization, *Arabidopsis thaliana* and *Brassica oleracea*, 499
  damage and early developmental arrest, *Rex* element, *Drosophila melanogaster*, 401
  effects of spontaneous mutation, quantitative traits, life history traits, 773
  fidelity of transmission, *CHL12*, yeast, 1067
  inverted repeat, *RAD51* and *RAD52* genes, mitotic recombination, 587
  organization and evolution, detailed RFLP map, *G. hirsutum* × *G. barbadense*, 829
  yeast artificial, stimulation of recombination by hot spot, meiosis, 1055
Chromosome 9, relationship, maize and wheat homeologous group 7 chromosomes, 1287
Chromosome 7, relationship between chromosome 9, maize and wheat homeologous group, 1287
Chromosome *X*
  hypertranscription, dosage compensation, male sciarids, 787

sex-determination signal elements, *Caenorhabditis elegans*, 1105
Chromosome *XI*, left arm of yeast, mapping of *DBR1* and *YPK1*, major revision, 283
Codon, bias, selection intensity, enteric bacteria, 227
Complex I, reduced function, maize NCS2 abnormal growth mutant, chimeric *nad4-nad7* mitochondrial gene, 855
Confidence interval, construction of, QTL location, 1301
Corn
  chimeric *nad4-nad7* mitochondrial gene, reduced complex I function, 855
  homeologous group 7 chromosome, relationship with chromosome 9, wheat, 1287
  intron of *knotted1* gene, *Mutator* insertions, dominant suppressible mutations, 1275
Cotton, *G. hirsutum* × *G. barbadense*, detailed RFLP map, 829
Cyclins, *HO/CLN1/CLN2* genes, three independent forms of regulation in yeast, cell cycle, 1015
Cyprinella spiloptera, 179
Cytochrome *b*, mRNA, suppressor analyses, temperature-sensitive *cbp1* yeast strains, 565
Cytonuclear disequilibria, sampling theory, 1351
Cytosine, methylation and transposase expression, somatic inactivation and reactivation of *Ac*, 213

Dictyostelium discoideum, 665
α-Difluoromethylornithine, basic amino acid transport mutants, polyamine-dependent processes, *Neurospora crassa*, 649
DNA
  complete sequence of mitochondrial domain, black chiton, 423
  damaging agents, G_1 checkpoint control, yeast, 271
  exogenous, homologous recombination and distribution of exchanges, *Xenopus laevis* oocytes, 445
  heteroduplex, repair of, *Xenopus laevis* oocytes, 459
  mitochondrial
    length variation, minnow, 179
    neutral and non-neutral evolution, *Drosophila melanogaster*, 741
    reversible changes, dedifferentiation and regeneration of tobacco, 865
  replicative helicase, involvement in DNA recombination, bacteriophage T4, 247
  selective pooling, determination of linkage, molecular marker and quantitative trait loci, 1365
  sequence comparisons, examples of evolution, gene duplication, 1331
  sequences, estimation of effective population size, frequencies of mutations, 1375
  sex-limited mitochondrial, transmission in the marine mussel, 801
DNA polymerase, *dnaE911* antimutator allele, spontaneous mutation, *Escherichia coli*, 263
Dosage compensation
  hypertranscription of the single X chromosome, male sciarids, 787
  period gene, *Drosophila melanogaster*, 721
Drosophila, 111, 125, 165, 387, 549, 1137, 1171
Drosophila melanogaster, 135, 145, 153, 343, 353, 365, 379, 401, 709, 721, 733, 741, 757, 773, 1127, 1151, 1181, 1315
Drosophila simulans, 329, 693, 757
Drosophila virilis, 1163
Drosophila yakuba, 757
Duplications, length variation in mitochondrial DNA, minnow, 179
Dysgenesis, *Enhancer of rudimentary*^{P1}, highly conserved enhancer of *rudimentary* gene, 1163

Element
  Stellate, genetic analyses, *Drosophila melanogaster*, 1181
  X-linked, negative segregation distortion, *SD* system of *Drosophila melanogaster*, 145
Embryo, *Drosophila*, dorsoventral polarity, *thick veins* gene, 165
Embryogenesis, *sine oculis*, *Drosophila* visual system development, 1137
Enhancer traps, marking of parasegmental domains, *Drosophila* bithorax complex, 387
Environment-genotype interaction, additive-multiplicative approximation, 1339
Epilepsy, genetic model, inbred mouse strains, 481
Epistasis
  evolution of reproductive isolation, peak shifts, two-allele model, 533
  genetics of hybrid male sterility, *Drosophila* sibling species, 329
Escherichia coli, 7, 227, 253, 263, 993
Evolution
  chromosome organization and, detailed RFLP map, *G. hirsutum* × *G. barbadense*, 829
  gene duplication, DNA sequence comparisons, 1331
  metallothionein gene *Mtn* in *melanogaster* species group, results from *Drosophila ananassae*, 135
  molecular
    plant *R* regulatory, 849
    substitution processes, deleterious alleles, 943
  neutral and non-neutral, mitochondrial DNA, *Drosophila melanogaster*, 741
  reproductive isolation by peak shifts, epistasis, two-locus two-allele model, 533
  somatic selection, antibodies, 975

Fertility
  autosomal polygenic variation, expression of Haldane's rule, beetles, 791

mutant and manipulated sperm, assessment of viability, *Caenorhabditis elegans*, 689
Fidelity, host determinants, rates of spontaneous mutation, bacteriophage T4, 553
Fitness, alternative sets, preservation, allele trajectories, 1323

Gene
calphotin, mutations and cellular morphogenesis, *Drosophila*, 413
chimeric *nad4-nad7* mitochondrial, maize NCS2 abnormal growth mutant, reduced complex I function, 855
CHL12, fidelity of chromosome transmission, yeast, 1067
daf-11 and *daf-21* mutants, multiple chemosensory defects, *Caenorhabditis elegans*, 303
DBR1 and *YPK1*, mapping of, left arm of yeast chromosome *XI*, 283
dilute suppressor, mouse, 491
directed replacement of *mt A* by *mta a-1*, mating type switch, *Neurospora crassa*, 75
duplication, examples of evolution, DNA sequence comparison, 1331
dynamics of variability, two-locus models, stabilizing selection, 519
eyes absent, transvection, 1171
GCR1, split gene with unusually long intron, yeast, 973
gpa2, glucose repression of *fbp1* transcription, *Saccharomyces pombe*, 39
her-1, sequenced alleles, *Caenorhabditis elegans*, 317
H3 histone, selection on silent sites, rodents, 191
HO/CLN1/CLN2, three independent forms of cell cycle regulation, yeast, 1015
hunchback, differential regulation of target genes by alleles, *Drosophila*, 125
interaction of *polyhomeotic* with *Polycomb* group genes, *Drosophila melanogaster*, 1151
interaction with *zeste* and control of *white* gene, mutations, *Drosophila melanogaster*, 733
knotted intron, *Mutator* insertions, dominant suppressible mutations of corn, 1275
Lighten up, position effect variegation and *white* locus insertion alleles, *Drosophila melanogaster*, 153
mab-19, selective lineage specification, male peripheral sense organ development in *Caenorhabditis elegans*, 675
maternal-effect selfish, population dynamics, 1309
mating-type, genomic subtraction, *Magnaporthe grisea*, 289
mec-8, muscle and sensory neuron function, *Caenorhabditis elegans*, 83
Myod1, original pink-eyed dilution mutation, Asiatic mouse, 203
nad4-nad7, maize NCS2 abnormal growth mutant, reduced complex I function, 855
period
dosage compensation, *Drosophila melanogaster*, 721
molecular polymorphism, *Drosophila simulans*, 693
phosphoglyceromutase, structure and duplication, *Drosophila melanogaster*, 353
plant *R* regulatory, molecular evolution, 849
RAD51 and *RAD52*, mitotic recombination, yeast, 587
Rex element, chromosome damage and early developmental arrest, 401
RGR1 and *SIN4*, RME1-dependent repression, yeast, 577
rudimentary, Enhancer of rudimentary^{p1}, highly conserved enhancer, 1163
sine oculis, homeobox gene, *Drosophila* visual system development, 1137
SOC1, suppressor analyses, temperature-sensitive *cbp1* yeast strains, 565
SPO13, negative regulation of progression, mitotic and meiotic nuclear division in yeast, 47
survived in offspring conditional on inheritance, proportion of, flanking markers, 953
swi8, specific mutations, mating-type region of *Schizosaccharomyces pombe*, 621
target, differential regulation by different alleles, *hunchback*, 125
thick veins, dorsoventral polarity of the embryo, *Drosophila*, 165
thirteen essential, cytological interval 22F1–2; 23B1–2, *Drosophila*, 111
β-tubulin, genetic variability in benzimidazole-susceptible and -resistant strains in *Haemonchus contortus*, 103
unc-52/smu-1/smu-2, muscle and sensory neuron function, *mec-8* gene of *Caenorhabditis elegans*, 83
variability in benzimidazole-susceptible and -resistant strains, β-tubulin genes, *Haemonchus contortus*, 103

Genome
analysis by restriction landmark genomic scanning, genetic linkage map, mouse, 1207
mitochondrial, unraveling selection, *Drosophila*, 757

Genomic subtraction, mating-type genes, *Magnaporthe grisea*, 289

Genotype-environment interaction, additive-multiplicative approximation, 1339

Glucose, repression of *fbp1* transcription, adenylate cyclase activation by G protein α subunit, *Schizosaccharomyces pombe*, 39

Gossypium hirsutum, 829

G protein
α subunit, glucose repression of *fbp1* transcription, *Saccharomyces pombe*, 39

β subunits, control of adaptation to mating pheromone, yeast, 1081
Gravity, wood-specific, quantitative trait loci, Loblolly pine, 1293

Haemonchus contortus, 103
Haldane's rule, autosomal polygenic variation, beetles, 791
Heteroduplexes, DNA, repair of *Xenopus laevis* oocytes, 459
Histone, H3 gene family, selection on silent sites, rodents, 191
Hitchhiking, detection of selective sweeps, naturally occurring *Escherichia coli*, 993
Holliday junction, 30th birthday, 241

i-antigen, *SerH3*, temperature-sensitive mutation, *Tetrahymena thermophila*, 297
Insemination, artificial, assessing viability of mutant and manipulated sperm, *Caenorhabditis elegans*, 689
Insertions, *Mutator*, dominant suppressible mutations, maize *knotted* gene, 1275
Interval 22F1–2;23B1–2, thirteen essential genes, neural development, *Drosophila*, 111
Intron
  Mutator insertions of maize *knotted1* gene, dominant suppressible mutations, 1275
  unusually long, split gene of yeast, *GCR1* gene, 973
Inversion, heterozygous paracentric, nonhomologous synapsis and reduced crossing over, yeast, 633

Katharina tunicata, 423

Lactose, utilization, population dynamics, Lac⁻ strain of *Escherichia coli*, 253
Linearity *vs.* nonlinearity, offspring-parent regression, *Drosophila melanogaster*, 343
Linkage, groups that repress transcription and meiotic recombination, mating-type region, *Saccharomyces pombe*, 29
Locus
  alcohol dehydrogenase, haplotypic divergence coupled with lack of diversity, *Arabidopsis thaliana*, 811
  mtr, spontaneous mutation, *Neurospora crassa*, 61
  sampling theory, cytonuclear disequilibria, 1351
  two-locus model, dynamics of genetic variability, stabilizing selection, 519
  two-locus two-allele model, epistasis, evolution of reproductive isolation by peak shifts, 533
  vestigial, targeted transposition, *Drosophila melanogaster*, 1127
  white and position effect variegation, *Lighten up* gene, *Drosophila melanogaster*, 153

Magnaporthe grisea, 289
Maize (*see* Corn)
MAP kinase, cascade interaction with Ste5p, protein-protein interactions, yeast pheromone response pathway, 609
Mapping
  comparative, islands of conserved organization, *Arabidopsis thaliana*, 499
  DBR1 and *YPK1*, major revision, left arm of chromosome *XI*, 283
  genetic linkage, restriction landmark genomic scanning, mouse, 1207
  interval, approximate thresholds, QTL detection, 235
  quantitative trait, empirical threshold values, 963
  quantitative trait loci, control, types I and II errors, 865
  REMI-RFLP, *Dictyostelium* genome, 665
  saturated molecular, intraspecific backcross population, rice genome, 1251
Maternal effect, selfish genes, population dynamics, 1309
Mating
  mutant and manipulated sperm, assessment of viability, *Caenorhabditis elegans*, 689
  mutator gene *swi8*, specific mutations, 621
  -type genes, genomic subtraction, *Magnaporthe grisea*, 289
  -type region of *Saccharomyces pombe*
    linkage groups, repression of transcription and meiotic recombination, 29
  -type switch, directed replacement of *mt A* by *mta a-1*, *Neurospora crassa*, 75
Meiosis
  genetic analysis of *Stellate* elements, *Drosophila melanogaster*, 1181
  heterologous YACs, recombination and sister chromatid cohesion, implanted recombination hot spot in yeast, 1055
  nuclear division, negative regulation of progression, *SPO13* in yeast, 47
  repressed transcription and recombination, linkage groups, mating-type region of *Schizosaccharomyces pombe*, 29
  RGR1 and *SIN4*, RME1-dependent repression, yeast, 577
Metallothionein, molecular evolution of *Mtn* gene, *melanogaster* species group, *Drosophila ananassae*, 135
Minnow, length variation, mitochondrial DNA, 179
Minor histocompatibility complex, *H4*, original pink-eyed dilution mutation, Asiatic mouse, 203
Mitochondria
  chimeric *nad4-nad7* gene, maize NCS2 abnormal growth mutant, reduced complex I function, 855
  cytochrome *b* mRNA, suppressor analyses, temperature-sensitive *cbp1* yeast strains, 565
  cytonuclear disequilibria, sampling theory, 1351

DNA
neutral and non-neutral evolution, *Drosophila melanogaster,* 741
sex-limited, transmission in the marine mussel, 801
domain, complete DNA sequence, black chiton, 423
genome of *Drosophila,* unraveling selection, 757
systematic heteroplasmy, genetic analysis, rabbits, 471
Mitosis
nuclear division, negative regulation of progression, *SPO13* in yeast, 47
recombination, *RAD51* and *RAD52,* chromosomal inverted repeat in yeast, 587
Morphogenesis, cellular, mutations in *calphotin, Drosophila,* 413
Mouse
Asiatic, original pink-eyed dilution mutation, *H4* minor histocompatibility antigen, 203
cell autonomous suppressor, *dilute suppressor,* 491
genetic linkage map, restriction landmark genomic scanning, mouse, 1207
inbred strains, genetic epilepsy model, 481
Mulinaria lateralis, 1199
Muscle, sensory neuron function and, *mec-8* gene, *Caenorhabditis elegans,* 83
Mussel, sex-limited mitochondrial DNA transmission, 801
Mutants
daf-11 and *daf-21,* multiple chemosensory defects, *Caenorhabditis elegans,* 303
maize NCS2 abnormal growth, chimeric *nad4-nad7* mitochondrial gene, reduced conplex I function, 855
sine oculis, homeobox gene, *Drosophila* visual system development, 1137
Mutations
analysis of C-terminal tail domain of RAP1, telomeric silencing, yeast, 1025
axr2–1, gain-of-function, *Arabidopsis thaliana,* 1239
calphotin, cellular morphogenesis and survival, *Drosophila,* 413
conditional-lethal, structure-based systemic isolation, single yeast calmodulin gene, 1041
conditional promoter, sex-determining gene *her-1, Caenorhabditis elegans,* 317
distribution of effects, viability, *Drosophila melanogaster,* 1315
Drosophila homeotic mutation *Nasobemia* ($Antp^{Ns}$), mutational reversion, *Drosophila melanogaster,* 709
frequencies of, estimation, effective population size, 1375
high frequency repeat-induced point, no association, efficient recombination in *Neurospora,* 1093
interaction of *polyhomeotic* with *Polycomb* group genes, *Drosophila melanogaster,* 1151
mutator gene *swi8,* mating-type region, *Schizosaccharomyces pombe,* 621
original pink-eyed dilution mutation, *H4* minor histocompatibility complex, Asiatic mouse, 203
quantitative traits, pleiotropic nonadditive model of variation, 883
recB, suppressors, *Salmonella typhimurium,* 11
-selection-shift balance, distribution of mean and variance, quantitative trait, 901
spontaneous
dnaE911 DNA polymerase antimutator allele, *Escherichia coli,* 263
mtr locus, *Neurospora crassa,* 61
quantitative traits, life history traits, 773
rates in bacteriophage T4, host fidelity determinants, 553
temperature-sensitive, *SerH3* i-antigen gene, *Tetrahymena thermophila,* 287
thirteen essential genes, cytological interval 22F1–2;23B1–2, *Drosophila,* 111
three genes that intract with *zeste,* control of *white* gene expression, *Drosophila melanogaster,* 733
Mytilus edulis, 801

Neuron, muscle and sensory, *mec-8* gene, *Caenorhabditis elegans,* 83
Neurospora crassa, 61, 75, 649, 657, 1093

O antigens, presence of different forms, three isolates of one clone, *Escherichia coli,* 7
Oryza sativa, 1251

P element
targeted transposition of *vestigial* locus, *Drosophila melanogaster,* 1127
thirteen essential genes, cytological interval 22F1–2;23B1–2, *Drosophila,* 111
Phenylalanine, structure-based systemic isolation, conditional-lethal mutations, single yeast calmodulin gene, 1041
Pheromone
mating, control of adaptation by G protein β subunits, yeast, 1081
response pathway in yeast, protein-protein interactions, 609
Phosphatase, PP1-like, yeast translational allosuppressor, *SAL6,* 597
Phosphoglyceromutase, structure and duplication of genes, *Drosophila melanogaster,* 353
Pine, Loblolly, quantitative trait loci, wood-specific gravity, outbred pedigree, 1293
Pinus taeda, 1293
Plasmids, integration of, bacteriophage T4 genome, 973
Point mutation, repeat-induced, sensitivity of *Tad, Neurospora crassa,* 657

Polarity, dorsoventral, *thick veins* gene, *Drosophila* embryo, 165
Polyamine-dependent processes and basic amino acid transport mutants, resistance to α-difluoromethylornithine, 649
Polymorphism
intronic, effect on alcohol dehydrogenase, *Drosophila melanogaster*, 379
molecular, *period* gene, *Drosophila simulans*, 693
restriction fragment length
detailed map, *G. hirsutum* × *G. barbadense*, 829
REMI mapping, *Dictyostelium* genome, 665
Population
approximate thresholds, interval mapping tests, QTL detection, 235
distribution of mutation effects, viability, *Drosophila melanogaster*, 1315
dynamics, maternal-effect selfish genes, 1309
dynamics of Lac⁻ strain, selection for lactose utilization, *Escherichia coli*, 253
effective size estimation, mutation rate, frequencies of mutations of various classes, 1375
genetic and statistical analyses, polygenic traits, strong selection, 913
intraspecific backcross, saturated molecular map, rice genome, 1251
proportion of genes survived in offspring, conditional on inheritance, flanking markers, 953
Position effect
reconsideration of mechanism, 1
variegation and *white* locus insertion alleles, *Lighten up* gene, *Drosophila melanogaster*, 153

Quantitative trait loci
detection, approximate thresholds, interval mapping tests, 235
empirical threshold values, 963
location, construction of confidence intervals, 1301
mapping of, control, types I and II errors, 865
molecular marker, determination of linkage, selective DNA pooling, 1365
mutation-selection-drift balance, distribution, mean and variance, 901
pleiotropic nonadditive model of variation, 883
wood-specific gravity in outbred pedigree, Loblolly pine, 1293

Rabbit, genetic analysis, systematic mitochondrial heteroplasmy, 471
RAP1, C-terminal tail domain, mutational analysis, telomeric silencing of yeast, 1025
Recombination
conversion or, tandem arrays, possible loss of length conservation and reciprocity, 511
DNA, replicative DNA helicase, bacteriophage T4, 247
high frequency repeat-induced point mutation, no association, *Neurospora*, 1093
homologous, distribution of exchanges, exogenous DNA in *Xenopus laevis* oocytes, 445
integration of plasmids, bacteriophage T4 genome, 973
meiotic, repressed transcription by linkage groups, mating-type region of *Schizosaccharomyces pombe*, 29
mitotic, *RAD51* and *RAD52*, chromosomal inverted repeat in yeast, 587
presence of different O antigens, three isolates in one clone, *Escherichia coli*, 7
repair of *Xenopus laevis* oocytes, 459
suppressors of *recB* mutations, *Salmonella typhimurium*, 11
Regression, offspring-parent, linearity *vs.* nonlinearity, *Drosophila melanogaster*, 343
Reproduction, isolation, evolution and epistasis, two-locus two-allele model, 533
Restriction landmark genomic scanning, genetic linkage map, mouse, 1207
Retroelement, *white* locus insertion alleles and position effect variegation, *Lighten up* gene, *Drosophila melanogaster*, 153
Retrotransposon, *Tad*, repeat-induced point mutation, *Neurospora crassa*, 657
Rice, genome, saturated molecular map, intraspecific backcross population, 1251
RNA
messenger, mitochondrial cytochrome *b*, suppressor analyses, temperature-sensitive *cbp1* yeast strains, 565
small nuclear, suppressor U1, *Drosophila melanogaster*, 365
Rodents, selection on silent sites, H3 histone gene family, 191

Saccharomyces cerevisiae, 271, 283, 553, 577, 587, 597, 609, 633, 973, 1005, 1025, 1041, 1055, 1067, 1081
Saccharomyces pombe, 39
Salmonella typhimurium, 11, 227
Sampling theory, cytonuclear disequilibria, 1351
Schizosaccharomyces pombe, 29, 621
Sciara ocellaris, 787
Sciarids, hypertranscription of chromosome *X*, dosage compensation, 787
Segregation distortion, negative, X-linked element, *SD* system of *Drosophila melanogaster*, 145
Selection
directional, haplotypic divergence coupled with lack of diversity, alcohol dehydrogenase locus in *Arabidopsis thaliana*, 811
genotype-environment interaction, additive-multiplicative approximation, 1339
intensity, codon bias, enteric bacteria, 227
lactose utilization, population dynamics, Lac⁻ strain of *Escherichia coli*, 253
mitochondrial genome of *Drosophila*, 757

mutation-selection-drift balance, distribution of mean and variance, quantitative trait, 901
quantitative traits, pleiotropic nonadditive model of variation, 883
stabilizing, two-locus models, dynamics of genetic variability, 519
strong, genetic and statistical analyses, polygenic traits, 913
Sense organ, male peripheral, selective lineage specification in *Caenorhabditis elegans, mab-19,* 675
Serine-rich N-terminal extension, yeast translational allosuppressor, *SAL6,* 597
Sex
determination, polypoid gigantism, *Minaria lateralis,* 1199
-determination signal elements, *X* chromosome regions, *Caenorhabditis elegans,* 1105
-determining gene *her-1,* sequenced alleles, *Caenorhabditis elegans,* 317
-limited mitochondrial DNA transmission, mussels, 801
Sister chromatids, enhanced exchange, implanted recombination hot spot, heterologous YACs during yeast meiosis, 1055
Sperm, mutant and manipulated, assessment of viability, *Caenorhabditis elegans,* 689
Spermiogenesis, genetic analysis of *Stellate* elements, *Drosophila melanogaster,* 1181
SPT6, SPT10 proteins and, no association or regulation in yeast CCR4 protein, 1005
Ste5p, interaction with MAP kinase cascade, protein-protein interactions, yeast pheromone response pathway, 609
Sterility, hybrid male, *Drosophila* sibling species, epistasis, 329
Substitution, processes, molecular evolution, deleterious alleles, 943
Suppressor
analyses of temperature-sensitive *cbp1* yeast strains, 565
recB mutations, *Salmonella typhimurium,* 11
U1, snRNAs in *Drosophila,* 365
Surfclam, dwarf, sex determination and polypoid gigantism, 1199
Synapses, neural development in *Drosophila,* thirteen essential genes, 111
Synapsis, nonhomologous, reduced crossing over in heterozygous paracentric inversion, yeast, 633

Telomere, silencing in yeast, mutational analysis of C-terminal tail domain of RAP1, yeast, 1025
Temperature
-sensitive *cbp1* strains of yeast, suppressor analyses, 565
-sensitive mutation, *SerH3* i-antigen, *Tetrahymena thermophila,* 297
Tetrahymena thermophila, 297
Threonine-glycine, molecular polymorphism, *period* gene, *Drosophila simulans,* 693
Tobacco, dedifferentiation and regeneration, reversible changes, composition of population of mtDNAs, 865
Transcription
fbp1, glucose repression, *Schizosaccharomyces pombe,* 39
repressed meiotic recombination and, linkage groups, mating-type region of *Schizosaccharomyces pombe,* 29
Transcription factors, SNF/SWI, formation of distinct complex, yeast CCR4 protein, 1005
Transposase, cytosine methylation, somatic inactivation and reactivation of *Ac,* 213
Transposon, *Tad,* sensitivity, repeat-induced point mutation, 657
Transvection, *eyes absent* gene, *Drosophila,* 1171
Tribolium castaneum, 791
Tribolium freemani, 791
Triploids, sex determination and polypoid gigantism, dwarf surfclam, 1199
β-Tubulin, genetic variability of genes, benzimidazole-susceptible and -resistant strains, *Haemonchus contortus,* 103

Viability, distribution of mutation effects, *Drosophila melanogaster,* 1315
Vision, *Drosophila* development, homeobox gene, *sine oculis,* 1137

Wheat, homeologous group 7 chromosome, relationship with chromosome 9, corn, 1287
Wood-specific gravity in outbred pedigree, quantitative trait loci, Loblolly pine, 1293

Xenopus laevis, 445, 459

Yeast
CCR4 protein, complex distinct from SNF/SWI transcription factors, 1005
chromosomal inverted repeat, *RAD51* and *RAD52* genes, mitotic recombination, 587
fidelity of chromosome transmission, *CHL12,* 1067
G_1 checkpoint control, exposure to DNA damaging agents, 271
G protein β subunit , control of adaptation, mating pheromone in yeast, 1081
heterologous YACs during meiosis, recombination and sister chromatid cohesion, implanted recombination hot spot, 1055
heterozygous paracentric inversion, nonhomologous synapsis, reduced crossing over, 633
negative regulation of progression, mitotic and meiotic nuclear division, *SPO13,* 47
pheromone response pathway, protein-protein interactions, Ste5p interaction with MAP kinase cascade, 609

RGR1 and *SIN4*, RME1-dependent repression, yeast, 577
single calmodulin gene, structure-based systemic isolation, conditional-lethal mutations, 1041
split gene with unusually long intron, *GCR1* gene, 973
suppressor analyses, temperature-sensitive *cbp1* strains, 565
telomeric silencing, mutational analysis, C-terminal tail domain of RAP1, 1025
three independent forms of regulation, expression of *HO/CLN1/CLN2*, cell cycle, 1015
translational allosuppressor *SAL6*, 597
